

How it Works

My Preferences

- **Select Preferences bar on top to modify Scoring tool.**

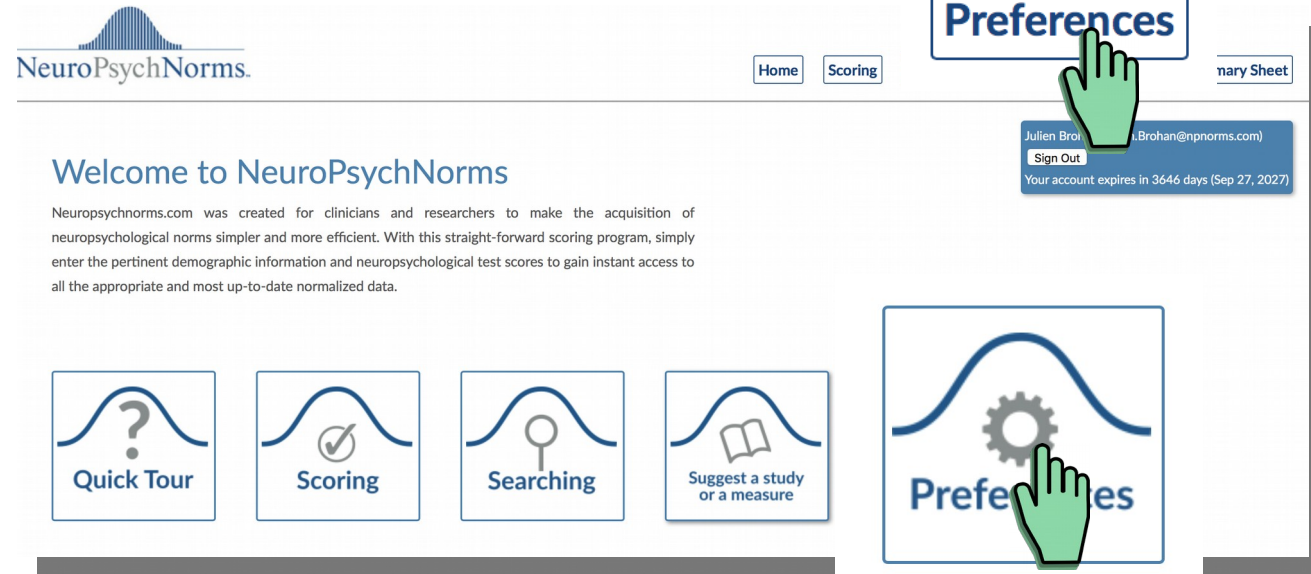

- Determine if you want to expand the lookup range for Age and/or Ed to obtain more hits (up to 10 for Age and up to 5 for Education); default is set at Zero.

- Determine if you want to specify searches on scoring program, such as Publication Types, Country, Language, and Ethnicity. Default is set to ALL.

- Determine if you want to limit Age/EDU range Query (i.e., R, C, E, M). Default is ALL queries.

- Select the Measures you want to display on the Scoring page, for example is you tend to use the Golden Stroop, select G_Stroop.

- Click on to Set Preferences to update changes for your preferences on scoring.

Welcome to NeuroPsychNorms

Neuropsychnorms.com was created for clinicians and researchers to make the acquisition of neuropsychological norms simpler and more efficient. With this straight-forward scoring program, simply enter the pertinent demographic information and neuropsychological test scores to gain instant access to all the appropriate and most up-to-date normalized data.

Quick Tour Scoring Searching Suggest a study or a measure Preferences

How it Works

My Preferences

- Select Preferences bar on top to modify Scoring tool.
- Determine if you want to expand the lookup range for Age and/or Ed to obtain more hits (up to 10 for Age and up to 5 for Education); default is set at Zero.**
 - This is helpful if you find yourself with not finding many norms for a client.**
 - For example, by adding +/- 1 for a 14 year old, you will be able to see norms for 13 and 15 years, too.**
- Determine if you want to specify searches on scoring program, such as Publication Types, Country, Language, and Ethnicity. Default is set to ALL.
- Determine if you want to limit Age/EDU range Query (i.e., R, C, E, M). Default is ALL queries.
- Select the Measures you want to display on the Scoring page, for example is you tend to use the Golden Stroop,

Set Preferences

How it Works

My Preferences

•Determine if you want to specify searches on scoring program, such as Publication Types, Country, Language, and Ethnicity. Default is set to ALL.

•R - The Real range is provided of sample (e.g., 35-44 years). If you only want, real ranges provided by the study, select R only.

•C - The Age was Calculated if study only provided Mean and SD for Age [e.g., Age = 40.3.1 (5.1)]; The range is calculated to be approximately +/- 1 SD; approximately 68% of the population fell within this range). In the above example, the age range is calculated to be around 35-45). The same was used for EDU, approximately +/- 1 SD.

E - Age and EDU was Estimated. For example, if no age was provided for a 5 year old, we may estimate EDU Range to be 0-1. Another example, where EDU Range needed to be estimated is when a study indicated college students; we estimated Edu Range to be 12-16.

•M -At other times, studies only provided Median/Midpoint for Age or EDU. The range was provided in between to data
